

Sprint 2 Release Plan

Description of Sprint 2 Tasks:

The expected tasks to be accomplished in Sprint 2 will be mainly focused on setting up the basics of the Network Management, Direct Messaging, Job Application, and Job Management systems. We implement features to allow users to follow people, direct message other users, post messages and images, post their CV and other documents, post jobs as a recruiter, and advertise as a recruit. Having these features implemented in sprint 2 will make it easier for feature sprints as these are important features that get more complex with security features and other such additional features as well. Implementing these stories now causes more division in our work with modules and makes it less likely to create errors.

Additional information:

- Platform will be available on web browsers and mobile devices friendly
- The database will be built as a Firebase project backed by Google Cloud

User Stories for Sprint 2

User Story ID	User Story Points (USP)	Priority	Status
16	21	Low	TODO
19	13	High	TODO
22	13	High	TODO
26	8	High	TODO
29	8	High	TODO
30	8	Medium	TODO
39	13	Medium	TODO
TOTAL USP	92
